Type: ROUTINE INSPECTION
Date: 09-APR-2007

2.40(x)

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

(a) Each exhibitor shall have an attending veterinarian who shall provide adequate veterinary care to its animals in compliance with this section.

(1) Each exhibitor shall employ an attending veterinarian under formal arrangements. In the case of a part-time attending veterinarian or consultant arrangements, the formal arrangements shall include a written program of veterinary care and regularly scheduled visits to the premises of the exhibitor;

The written program of veterinary care has not been formally reviewed by the attending veterinarian of record and the licensee for 18 months. Additionally, a formal site visit was last conducted by the attending veterinarian of record 18 months ago. The licensee indicated that veterinary oversight has been conducted by an alternate veterinarian of the licensee's choice. The licensee states that he will formally retain a new attending veterinarian for this site.

To ensure adequate veterinary care for regulated animals a written program of veterinary care must be established with the attending veterinarian and reviewed annually. Formal arrangements with the attending veterinarian must include regularly scheduled visits to the premises.

Correct by: May 9, 2007.

3.81

ENVIRONMENT ENHANCEMENT TO PROMOTE PSYCHOLOGICAL WELL-BEING.

Exhibitors must develop document and follow an appropriate plan for environment enhancement adequate to promote the psychological well-being of nonhuman primates. The plan must be in accordance with the currently accepted professional standards as cited in appropriate professional journals or reference guides, and as directed

Inspection Report

by the attending veterinarian. The plan, at a minimum, must address each of the following:

(c) Special considerations. Certain nonhuman primates must be provided special attention regarding enhancement of their environment, based on the needs of the individual species and in accordance with the instructions of the attending veterinarian. Nonhuman primates requiring special attention are the following:

(2) Those that show signs of being in psychological distress through behavior or appearance;

The male Mandrill, Congo, has marked alopecia on all 4 limbs. The alopecia was initiated and sustained by over grooming as verified by the licensee. The primate enrichment plan presented during this inspection does not include written provisions for special considerations of those primates which may be exhibiting psychological distress through aberrant behaviors such as self plucking or over grooming.

The licensee was able to verbally describe special attention which could be provided to Congo to enhance his environment. However, most of these additional environmental enhancements were not evident during this inspection and are not documented in the primate enrichment plan. Additionally, specific documentation of special attention previously provided to Congo was not supplied by the licensee within a reasonable time after this inspection.

Please consult your attending veterinarian for development, documentation and delivery of an environmental enrichment program which includes special considerations for those non-human primates exhibiting psychological distress through behavior and appearance.

Correct by: May 9, 2007.

Animals inspected: 2 Raccoons, 2 Capuchins, 2 Binturongs, 4 Baboons, 1 Mandrill, 2 Black/White Ruffed Lemurs, 1 Bonnet Macaque, 1 Rhesus Macaque, 2 Snow Macaques, 3 Leopards, 1 Cougar, 1 Liger, 2 Tigers.

2.40(b)(3)

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

2.40 (b)(3) Daily observation of all animals to assess their health and well-being; Provided, however, That daily observation of animals may be accomplished by someone other than the attending veterinarian; and Provided, further, That a mechanism of direct and frequent communication is required so that timely and accurate information on problems of animal health, behavior, and well-being is conveyed to the attending veterinarian.

***The white tiger in stall number 4 has a 2cm smooth red raised nodular mass in the inside of the left ear. The owner was unaware of this issue. There must be a method in place that allows for daily observation of the animals and any issues should be brought to the attention of the attending veterinarian. Failure to do this observation could result in minor health problems becoming major issues. This affects one animal.

To be corrected by: 23 June 2007

3.84(c)

CLEANING, SANITIZATION, HOUSEKEEPING, AND PEST CONTROL.

3.84 (c) Housekeeping for premises. Premises where housing facilities are located, including buildings and surrounding grounds, must be kept clean and in good repair in order to protect the nonhuman primates from injury, to facilitate the husbandry practices required in this subpart, and to reduce or eliminate breeding and living areas for rodents, pests, and vermin.

***The light fixture in the mandrill enclosure has hot wire surrounding it. This wire was covered with spider webs. Live spiders were observed in the area. Facilities must be kept clean to eliminate living areas for pests and vermin. This affects one animal.

This was corrected during the inspection.

Inspection Report

3.125(a)

FACILITIES, GENERAL.

3.125 (a) Structural strength. The facility must be constructed of such material and of such strength as appropriate for the animals involved. The indoor and outdoor housing facilities shall be structurally sound and shall be maintained in good repair to protect the animals from injury and to contain the animals.

***The enclosure housing "Burma" the 22 year old female tiger is a chain link enclosure. The bottom edge of the chain link fencing is not secured. The floor of the enclosure is earth and there is potential for the animal to dig. Because the bottom edge of the fencing is not secured adequately there is the potential for the animal to escape. It also has the potential for other animals to dig into the enclosure. This affects one animal.

To be corrected by: 13 Jul 07

3.126(c)

FACILITIES, INDOOR.

3.126 (c) Lighting. Indoor housing facilities shall have ample lighting, by natural or artificial means, or both, of good quality, distribution, and duration as appropriate for the species involved. Such lighting shall be uniformly distributed and of sufficient intensity to permit routine inspection and cleaning. Lighting of primary enclosures shall be designed to protect the animals from excessive illumination.

***There is no artificial light in stalls 1,2, and 11. These stalls had a limited amount of natural light coming through windows but it was not adequate enough to properly illuminate the entire enclosure. The front portion of the enclosures are very dark not allowing for proper inspection. Lighting must be of good quality and adequately distributed throughout the entire enclosure. This affects eight animals.

This was corrected during the inspection.

2.131(c)

HANDLING OF ANIMALS.

(c)(1) During public exhibition, any animal must be handled so there is minimal risk of harm to the animal and to the public, with sufficient distance and/or barriers between the animal and the general viewing public so as to assure the safety of animals and the public.

*An 8 month old tiger was exhibited to the public without sufficient distance and/or barriers to assure the safety of the public. The tiger was led down a walkway passing by the public to the front of a stage. Although the tiger was secured to a cable on the ground when walking and exhibited, the cable was noted to have significant play in it. A metal barrier approximately 3 feet high was in place. No attendants were on the audience side of the barrier. The proximity of the tiger to the public when the animal is in the walkway necessitates additional security measures should be taken to ensure public safety.

*A cougar, approximately 5 1/2 months old, was exhibited to the public on a chain leash behind a barrier approximately 3 feet high. Insufficient distance existed between the public and the animal to assure the safety of the public. Although a sub-adult, the size and awareness of this animal mandates that additional distance, barriers or security measures should be implemented for public safety.

Sufficient distance and/or barriers must be in place when exhibiting dangerous animals to the public.

Correct by: All future exhibition of large felids (dangerous animals.)

Animals inspected: 1 Liger, 9 Tigers, 2 Skunks, 1 Orangutan, 1 Gibbon, 1 Cougar, 3 Binterongs.

Exit interview conducted.

2.40 (b) (2)

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

(b) Each dealer or exhibitor shall establish and maintain programs of adequate veterinary care that include:
(2) The use of appropriate methods to prevent, control, diagnose, and treat diseases and injuries, and the availability of emergency, weekend, and holiday care

***The most recent tuberculosis test results available for review for 1 elephant (23-year old female African "Bubbles") are dated 3/18, 3/19, 3/20 of 2007. This elephant has direct contact with the public. Because tuberculosis is a contagious disease affecting elephants, humans, and other animals, periodic testing is indicated. Current professional guidelines indicate that such testing be conducted no less than annually. Current tuberculosis testing must be conducted by the attending veterinarian. Correct by: 26 Apr 08.

FACILITIES, GENERAL.

(a) Structural strength. The facility must be constructed of such material and of such strength as appropriate for the animals involved. The indoor and outdoor housing facilities shall be structurally sound and shall be maintained in good repair to protect the animals from injury and to contain the animals.

*On Saturday, August 28, 2010, an adult tiger, " Mahesh" escaped an uncovered outdoor primary enclosure, constructed primarily of chain link at the Miami exhibition location. The tiger was motivated to chase a non-human primate which had entered the enclosure through the open top and was quickly trying to exit back out of the enclosure after encountering a tiger. The tiger was able to scale a 12 foot tall corner, engage and damage the kick back and subsequently escape over the top of the enclosure. The tiger did not fall or jump cleanly upon exiting the enclosure and was stunned for a short time after hitting metal poles and parts of the barrier fence surrounding the outside of the enclosure.

The facility should review and address both the structural design and strength of materials currently used in this primary enclosure. The enclosure has historically housed adult tigers and a liger, a species typically larger than tigers.

*Mahesh was subsequently moved to the other Miami location assigned under site 002. The tiger has been housed in an open top, chain link enclosure 12 feet high with no kick back at this location since escaping on August 28, 2010. This tiger has previously demonstrated the ability to escape a similarly constructed enclosure and cannot be considered securely contained. The animal must be re-located to an appropriate primary enclosure or the current enclosure modified to securely contain the animal.

Primary enclosures must be of sound design and strength to contain the species housed within in order to assure public safety and protect the animals. No adult, large exotic felines may be housed in the above enclosures as they are currently constructed.

Correct by: Immediate.

Exit interview conducted via telephone with the licensee.

3.125 (a)

FACILITIES, GENERAL.

Section 3.125(a) states "Structural strength. The facility must be constructed of such material and of such strength as appropriate for the animals involved. The indoor and outdoor housing facilities shall be structurally sound and shall be maintained in good repair to protect the animals from injury and to contain the animals."

On August 28, 2010 an adult tiger escaped from an uncovered outdoor primary enclosure at the licensee's Miami exhibition location. The tiger was able to jump out of a 12 foot chain link enclosure with an 18 inch kick-in. This cat is currently at this location, but it is in a covered enclosure.

At this location, 43 adult tigers, 3 ligers, and 2 lions are currently housed on a rotating basis in similar types of open top enclosures. There are 5 open top enclosures consisting of heavy chain link fencing sides of approximately 12 foot high, with two having no kick-ins, and the other two having a 3 heavy wire strand kick-in of approximately 12-14 inches. Also, the two barn outdoor enclosures at the ends are open top with 10 foot concrete side and back walls and a front chain link wall measuring between 9 and 10 feet. Many of these enclosures have substantial amounts of vines growing up the sides and accumulating at the top of the fences, to where the vines are drooping over into the pens.

Primary enclosures must be of sound design and strength to contain the species housed within in order to assure public safety and protect the animals. Although these animals have been in these enclosures for at least 5-15 years, these type enclosures have proven to not be able to adequately contain all large cats. The enclosures need to be modified with additional height or other containment measures to provide additional security. Vines hanging into the enclosures need to be removed to prevent additional foot holds.

To be corrected by 12-20-10.

Exit briefing conducted with facility representative.

2.131 (c)(3)

HANDLING OF ANIMALS.

Section 2.131 (c) (3) states - "During public exhibition, dangerous animals such as lions, tigers, wolves, bears, or elephants must be under the direct control and supervision of a knowledgeable and experienced animal handler."

1. APHIS personnel were present during a show using Big Cats. The Big Cats were on an elevated stage that was 5 feet above the ground. There was a 3-4 foot tall wooden rail fence located 10 feet in front of the stage that separated the public from the stage. The adult Big Cats, specifically adult Tigers and an adult Liger, were led from the backstage holding area out to the stage by the Licensee. The Big Cats had a collar around their neck that was connected to a chain leash that was held by the Licensee. During the show, the Big Cats were led across the stage and went up onto an elevated platform during the presentation. Although there was a cable system present on the stage, the leash that was held by the Licensee was the only method of restraint being used to control the Big Cats during the show.

Per this Section of the Regulations, dangerous animals must be under the direct control of the handler whenever these animals are exhibited to the public. The use of a leash that is held by a handler as the sole means of control when an adult Big Cat is being exhibited to the public is not sufficient to restrain a powerful potentially dangerous adult Big Cat.

The Licensee needs to include the cable system as an additional method of restraint to ensure the Big Cats remain under the direct control during public exhibition for the safety of the public.

Correct by 10/13/12

NOTE - Inspection conducted at the Renaissance Faire in Carver, MA by Drs. Paula Gladue and Tonya Hadjis.
Exit interview held 10/6/12 on-site with Licensee. *END OF REPORT*

851 FOLLY RANCH LANE

MYRTLE BEACH, SC 29588

3125 (c)

FACILITIES GENERAL

(c) Storage. Supplies of food and bedding shall be stored in facilities which adequately protect such supplies against deterioration, molding, or contamination by vermin.

*The floor of the walk in cooler has a broken/missing tile and another tile near the back wall is lifting and coming loose. Adequate sanitation of the floor may not be possible as water and debris can collect under the broken tiles.

*The shelves used for food storage in the walk-in cooler are coated with a thick, white easily removable substance that was not identifiable. This substance was also noted splattered on the inside wall to the left of the door. The shelves and wall should be cleaned to remove the unknown substance.

The food storage area must be kept in good repair and cleaned as necessary to ensure food is protected against deterioration. The food storage area should be repaired and cleaned.

Correct by: September 5 2013.

Date: 05 February 2014

MYRTLE BEACH, SC 29588

3.125 (a)

FACILITIES, GENERAL.

* There was a ten-month-old male tiger housed in an open top enclosure constructed with 4.5" x 4.5", high-tensile, stainless steel squares. The enclosure was 12 feet high with no kick-in or hot wire. Tigers have been known to scale fences constructed by this design and therefore this animal is not considered securely contained in its enclosure.

** Primary enclosures must be of sound design to contain the species housed within in order to assure public safety and protect the animals.

*** The licensee must ensure the tiger is housed in an enclosure that will be contain the animal securely.

CORRECT BY: 5 April 2014.

The inspection and an exit interview were conducted with a facility representative.

SANITATION.

Evidence of vermin/pest infestation was observed at the facility's food preparation room. Several spiders, a frog, and spider webs were observed making contact with recently washed food bowls. Additionally, rodent droppings were observed in the floor. The potential for contamination by vermin/pests should be minimized at all times to prevent health issues on the regulated animals. A safe and effective program for the control of insects, ectoparasites, and avian and mammalian pests shall be established and maintained.

DIRECT NCI

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

One older male lion named Aslan was in the outdoor portion of a sheltered housing enclosure. The lion was missing hair over both lower front legs (just above paws), both lower rear legs (just above paws) and along the right hindquarters from the hip to the knee. The skin showing in all places was pink to red in color. An open, raw, bright red, round lesion approximately ½ inch in diameter was visible on the lower right rear leg. The lion was observed rising from a lying position and walking. The lion appeared stiff and stilted during rising and walked with an occasional slight stumble. The flooring of the enclosure was concrete both indoors and outdoors. A white firm slippery looking resting mat was noted on the floor indoors. The facility representative states the lion is on a joint supplement but no other medications and has gotten worse in the last couple of weeks. Untreated skin and joint issues can lead to pain and distress to the animal and secondary infections. The attending veterinarian last saw the lion on Jan. 9, 2016. She has not been contacted since the lion's condition worsened.

One 14 year old white tiger named Kailash was very thin with protruding vertebrae along his back and protruding hip bones. The facility representative stated they were aware he was losing weight and were trying to feed him a special diet. She stated he was eating but was not gaining weight back. The attending veterinarian last saw the tiger on Jan. 9, 2016. She stated she recommended blood work be done, but the facility declined. The facility has not updated the veterinarian on Kailash's condition since then. Weight loss can be a sign of many different medical conditions.

One tiger named Mooton was housed separately in an outdoor area behind the barn. The facility representative stated that he was not eating well the last few days and seemed stressed by ongoing construction. He was separated to monitor his appetite and well-being. Loss of appetite can be a symptom of a medical issue, stress or other issues. The veterinarian has not yet been contacted about this tiger.

These cats were seen by the attending veterinarian during this inspection and further treatments were prescribed.
Treatments to be instituted by 2-24-16.

Inspection Report

2.40 (b) (3)

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

During this inspection at least three big cats were observed with problems of animal health and well-being. Although the caretakers observed the conditions, and in one case were taking actions, the attending veterinarian was not contacted. When the inspectors contacted the attending veterinarian she indicated she was not notified of the deteriorating condition of the male lion. The veterinarian was last at the facility on 1-9-16. The facility needs to have a mechanism of direct and frequent communication to the attending veterinarian so that timely and accurate information of problems of animal health, behavior, and well-being is conveyed. To be corrected with future health issues.

3.80 (b) (2) (i)

PRIMARY ENCLOSURES.

A juvenile 3-4 year old chimpanzee returned with his primary caretaker to this facility 3 days ago. During this inspection the chimpanzee was brought out of a metal crate cage in the apartment where he was put while the caretaker was working outside. The metal enclosure measured 40 inches long by 24 inches wide by 26 inches high. Although a majority of time the chimpanzee would not be housed in this enclosure, the enclosure must be meet the minimum space requirements. The enclosure only provides 6.7 square feet of floor space whereas 25.1 square feet is required. Also the enclosure has to be a minimum of 84 inches high. To be corrected by 2-26-16.

3.81 (c) (4)

ENVIRONMENT ENHANCEMENT TO PROMOTE PSYCHOLOGICAL WELL-BEING.

The current Environmental Enhancement Plan does not address the juvenile chimpanzee on the property. This is the only primate currently at this facility, therefore it is unable to see and hear nonhuman primates of its own or compatible species. The plan is to describe how the social needs are provided for any nonhuman primate unable to see or hear other nonhuman primates. To be corrected by 3-18-16.

3.128

SPACE REQUIREMENTS.

The leopard housing consists of a large outdoor enclosure and four small separate feeding stations behind the main enclosure. During the inspection one adult leopard was confined to the feeding stations to facilitate behavioral observations. Two adult leopards were in the large outdoor enclosure. Each of the metal feeding stations are approximately three feet tall, two feet wide and six feet long, all connected by a hallway. The facility representative stated the leopards were rotated so each could get some exercise. The feeding stations section is not large enough to provide the leopards adequate space to perform normal postural adjustments with adequate freedom of movement. The vertical height restriction of the feeding stations prevents the leopards from jumping and stretching vertically. The short crate sections prevent the leopards from running, jumping and climbing. Inadequate space may lead to stress, poor condition and abnormal behavior patterns. Enclosures used to house the leopards must be constructed and maintained so as to provide sufficient space to allow the animals to make normal postural adjustments with adequate freedom of movement. Correct by March 18, 2016.

2.40(a)(1)

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

The written Program of Veterinary Care (PVC) was missing the required frequency for regularly scheduled visits by the attending veterinarian (AV) to the site premises. Formal arrangements with the facility's AV must include regularly scheduled visits to the premises. To ensure adequate veterinary care to regulated animals, the licensee and the AV should review and update the PVC as soon as possible.

Correct by: March 18, 2016

3.125(d)

FACILITIES, GENERAL.

A large accumulation of debris consisting mainly of dead vegetation was observed in very close proximity to the northwest portion of the perimeter fence. Removal and disposal of debris/trash at the facility's buildings and grounds are paramount to minimize vermin infestation into primary enclosures and potential disease hazards to regulated animals. Debris and trash at the facility should be removed and properly disposed as soon as possible.

Correct by: March 18, 2016

3.127(d)

FACILITIES, OUTDOOR.

The facility's perimeter fence was found in need of repair along the south and northwest portions. The barb wire lines that rest on the extension arms of the fence were out of place and/or damaged along the affected fence portions. The facility's perimeter fence must be maintained in good repair and be structurally sound so that it protects regulated animals by restricting vermin and/or unauthorized persons from going through it, over it, or under it, and so that it can function as a secondary containment system for the animals at the premises. The perimeter fence needs to be repaired/replaced as soon as possible.

Date: Mar-24-2016

2.40 (a) (1)

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

Although the written Program of Veterinary Care is available, it does not address a recurring problem at the facility. Tiger cubs were transferred from the Florida facility to the Myrtle Beach facility on 2-22-16. Two of the white tiger cubs then exhibited ringworm like lesions on the dorsum of their paws. The licensee started the treatment he has used in the past. At this inspection, the small circular areas of hair loss on the paws all have new hair growth occurring. Although the treatment given appears to be working, the Attending Veterinarian has not signed off on this particular treatment.

Because ringworm can be a recurring problem, the licensee and the Attending Veterinarian need to develop a written plan for how it will be treated. The treatment plan needs to include treatments to be used, any environmental measures to take, and public safety issues to address, such as when the animals can have public contact.
To be corrected by 4-15-16.

Exit briefing conducted with facility representative.

Date: 31-JAN-2017

3.125(a)

FACILITIES, GENERAL.

Three metal hose clamps been used to secure joining sections at the cougar's primary enclosure, were observed to be deteriorating; having sharp points/edges. Damage metal components on primary enclosures for regulated animals could develop sharp points and edges, that might injure these. Housing facilities must be kept in good repair and must be free of jagged edges; protecting the animals from injury, and containing the animals securely. All damaged hose clamps at primary enclosures/cages must be replaced and/or fixed to prevent the potential of an injury to regulated animals.

Correct by: March 1, 2017

This inspection and exit interview were conducted with Dr. Bhagavan Antle, T.I.G.E.R.S. Director.

Type: ROUTINE INSPECTION
Date: 11-JAN-2018

3.75(a)

HOUSING FACILITIES, GENERAL.

Five areas of damaged and deteriorating roof tin/metal components were identified at the primary enclosure of two nonhuman primates (NHP's); gibbons named Santoshi and Saiuka. All roof damaged areas exhibit sharp points/edges which the gibbons could easily reach and/or grab. Also, several metal hose clamps attached to primary enclosures have exposed sharp ends that are in need of repair/adjustment. Damaged metal components with sharp points/edges identified on primary enclosures might injure regulated animals. Housing facilities for NHP's must be kept in good repair, and must be free of jagged edges; protecting regulated animals from injury, and containing the animals securely. All damaged and deteriorating metal components at primary enclosures must be repaired and/or replaced to prevent/eliminate the potential of an injury to regulated animals.

To be completed by: February 11, 2018

This inspection and exit interview were conducted with a facility representative.

How was complaint received? email

Forward response to FOIA: Yes No **Details of Complaint: see attached.****Results:**

Complainant's correspondence included specific allegations pertaining to the Licensee's animals at the King Richard's Renaissance Faire in Carver, MA on 9/15/13. Allegations: (1) Failure to provide drinking water to tiger cubs; (2) Hair loss on tiger cub indicative of Ringworm; and (3) Tiger handler stuck her fingers through enclosure fence and touched tiger cubs; complainant also stated that a small child could duck under barrier fence and have direct contact with the tiger cubs. Tonya Hadjis and I went to the renaissance fairgrounds on Thursday 9/26/13 to conduct an inspection in response to the complaint and met with a representative of the Licensee.

Allegation #1: All of the exotic cats on the premises (9 tigers and 1 Canada Lynx) had drinking water in their primary enclosures at the time of the inspection. Tonya and I had also conducted a routine inspection of the Licensee on Sat 9/14/13 when the faire was open and at that time we were told that water is provided to the cats in between the shows when the cats are housed in the holding enclosures behind the stage. Although the faire was not open on the day of the complaint inspection (faire is open on weekends only), the representative of Licensee told us the same thing. Only the youngest tiger cubs are placed in the outdoor exhibit space in between the

shows when the faire is open (these are the animals named in the complainant's letter). The representative of Licensee showed us on 9/26/13 where a bowl of drinking water is put just inside the outdoor enclosure near the gate when the cubs are in the pen. This allegation does not appear to be valid.

Allegation #2: We looked at the coat and skin of all of the exotic cats on the premises at the time of the 9/26/13 inspection. We did not identify any areas of hair loss or abnormalities of the skin or coat of any of the cats. However one of the youngest tiger cubs did have an area of fur on the right paralumbar area that was located in between adjacent black stripes where the fur was a lighter color than the rest of the coat. The location of the lighter colored fur on this particular tiger cub corresponded to the location of the patch of missing fur identified by the complainant. However there was no hairloss or abnormal appearance of the skin noted in the area of lighter colored fur of the tiger cub. This allegation was not valid.

Allegation #3: The outdoor enclosure is only used to house the youngest tiger cubs in between the shows when the faire is open. There is a wooden barrier fence comprised of horizontal boards and vertical posts that is approximately 4 feet high that surrounds the outdoor exhibit's chainlink enclosure. The distance between the chainlink sides of the enclosure and the wooden public barrier fence varied but was at least 3 or more feet on all sides. The representative of the Licensee told us that there are at least 2 employees stationed in the outdoor exhibit area at all times whenever there are tiger cubs in the outdoor exhibit pen. Tonya and I had also conducted a routine inspection of the Licensee on Sat 9/14/13 when the faire was open and at that time we did see 2 representatives of the Licensee present when the tiger cubs were in the outdoor enclosure in between the shows. An employee of the Licensee is not considered to be a member of the general viewing public and as such is not prohibited from having direct contact with the animals. This allegation was not valid.

In summary, we did not identify any non-compliant items during the inspection on 9/26/13.

Subject: Complaint re: conditions of tiger cubs at King Richard's Faire

Dear Director Goldentyer:

This past weekend, I went to the King Richard's Faire in Carver, Massachusetts where they had a tiger show and tiger cubs on display. I witnessed some disturbing conditions with the tiger cubs which I wanted to report. It would be great if a USDA Inspector investigate the matter as the Faire is set to continue through Oct 20th. I've outlined my complaints in the attached pdf and I have included relevant photos. (I have more photos and video clips that I can share with you if you are interested)

Please feel free to contact me if you have any questions. Thank you in advance for your attention to this matter.

Best regards,

(b) (6), (b) (7)(C), (b)
(7)(D)

RE: Tiger Cubs at King Richard's Faire

Dear Director Goldentyer:

This past Sunday, September 15, 2013, I attended the King Richard's Faire ("Faire") in Carver, Massachusetts where I observed some disturbing conditions with the tiger cubs that were on display. Based on the information disseminated at the Faire, the tiger cubs are owned and displayed by the organization T.I.G.E.R.S. (The Institute of Greatly Endangered and Rare Species) which was founded by Bhagavan Antle and is located in Myrtle Beach, South Carolina.

The disturbing conditions I observed are as follows:

1. Failure to provide the tiger cubs with drinking water.

After walking around the perimeter of tiger cub cage it was immediately apparent to me that the tiger cubs did not have access to water of any kind. I spent a considerable amount of time watching the cubs in their cage. By the afternoon, one of the tiger cubs appeared to have been sweaty and laboring to breathe. I found this to be extremely disturbing as at no time did I witness anyone giving the tiger cubs water. Given the fact that it was a warm day and the young age of the tigers, there should have been drinking water made readily available to the tiger cubs in their cage.

2. Ringworm.

A patch of fur was noticeably missing from the back of one of the tiger cubs. Based on what can be seen in the photos - to people who are familiar with tigers, it appears that the missing fur is likely due to ringworm. While not life threatening, information online indicates that ringworm is highly contagious, very uncomfortable and takes treatment for weeks to eliminate. It also can take 10-14 days to appear, so someone who contracts ringworm is unlikely to associate it with the tiger exhibit. The fencing of the tiger cub display was such that a small child could duck under the outer perimeter fence and stick his fingers into the cage to gain direct contact with the affected tiger cub. In fact, during one instance when I was watching the tiger cubs, I watched a handler stick her fingers in the cage touch the infected tiger. I found this to be concerning as

ringworm is highly contagious from person to person, and any person who this handler touched could unknowingly contract it from her.

The below photo is of the tiger handler who stuck her fingers in the cage and touched the tiger cub with the missing patch of fur.

Request for investigation.

King Richard's Faire is set to continue through October 20th. I respectfully, request that a USDA inspector be sent to the site to investigate (1) the health of the tigers, and (2) the condition in which the tigers are being kept. Please note: that the tiger show I attended on September 15th showcased at least 6 juvenile/adult tigers which were not on display. I am requesting that the USDA inspector check up on all tigers present at the Faire.

I am extremely concerned for the health and wellbeing of tigers which are being showcased at the Faire as well as the potential contact the public may have with those tigers.

Please feel free to contact me if you have any questions or if you would like to further discuss this matter with me.

Sincerely,

23 September 2013

Dear (b) (6), (b) (7)(C)

Thank you for your email of 20 September 2013 concerning Bhagavan Antle, DBA T.I.G.E.R.S. Your concern has been issued number E13-316. If you wish to know the results of our findings, you can do so one of two ways:

1. Inspection reports for licensees are now available on our website after a 21 day mandatory holding period. You may view or retrieve the reports at: <http://acissearch.aphis.usda.gov/LPASearch/faces/Warning.jspx>.
2. If you wish to request more than inspection reports, or request the results of a complaint on a class Research Facility, you must submit a request, in writing, to our Freedom of Information Act office, using one of the following methods.
 1. Email: foia.officer@aphis.usda.gov
 2. Fax: 301-734-5941
 3. US Mail: USDA, APHIS, FOIA
4700 River Road, Unit 50
Riverdale, MD 20723

Depending on the circumstances of the situation, please allow us enough time (30 to 60 days) to thoroughly investigate your concerns.

Animal Care is the division of the U.S. Department of Agriculture (USDA) that is responsible for the enforcement of the Animal Welfare Act. The Act provides minimum standards for the humane care and use of animals at USDA licensed or registered facilities.

Animal Care inspectors conduct routine unannounced inspections at all USDA licensed and registered facilities to ensure that they are meeting or exceeding these minimum standards. Our inspectors also conduct searches for unlicensed facilities conducting regulated activities. We perform inspections and searches when necessary in response to valid concerns and complaints received from the public to ensure the well-being of the animals and compliance with the law. If violations are found, enforcement action appropriate for the circumstances will be initiated.

Please be assured that we will look into your concerns and take appropriate action if necessary.

Thank you for your interest in the welfare of these animals.

Sincerely,

Elizabeth Goldentyer, D.V.M.
Regional Director – Animal Care
Eastern Region

Forward response to FOIA: Yes

No

Details of Complaint: See attached.

Results: Inspection conducted on 7-10-14 at Barefoot Landing to observe unloading of animals from transfer vehicle and to observe photos being made with animals and the paying public. Photo shoots observed for 1.5 hours. There were a total of 13 tigers, 1 chimpanzee, and one gibbon present. The three young adult (2 year olds) tigers were on display in the front glass enclosed area, inaccessible to the public. Two older cubs were separated (and not used for photos) from 5 other younger cubs in two enclosures available for public viewing. There were three even younger cubs (4-6 weeks old) kept in a baby crib in an air conditioned room just off of the employees break room. The baby gibbon and chimpanzee had travel enclosures in the air conditioned break room area.

There were no items cited for being out of compliance. There were no instances of rough or excessive public handling. Time intervals of use appeared appropriate for not causing stress. Animals were under the direct physical or verbal control of the handlers at all times. No animals were observed with any stereotypic or abnormal behaviors. Members of the public were directed to sit on a chair bench. Photos were made of groups of from 1 to 8 people, with most groups consisted

of 3-5. Children and babies were included. Purses and articles were placed to the side before sitting on the bench. There was one photographer and 3 handlers at all times. The photo shoots lasted approximately a minute per group. The people would sit or stand behind the bench and receive instruction of where to place their hands. Eight cubs were used for photos and they were rotated. Members of the public were not allowed to "choose" a color or a particular cub, although I heard a few ask. They were told the cubs were being rotated and they were to be photographed with the one whose turn it was. Each cub was used for about 5 minutes, then returned to the play room (the older cubs) or the crib (the 3 younger cubs). When the three younger cubs were observed they were sleeping. One ear on one cub was wet and down, due to one of the other cubs sucking on it. The three youngest cubs were not placed in laps, but were held up by the caretaker next to the public members face and the person instructed how to hold the cub under the front legs with rear legs dangling. The person would hold the cub this way for less than 5 seconds, before the cub would be back with the caretaker and on to the next person. After everyone's photo was taken this way, more photos were made with the cubs face being placed in front of the public members face, forehead to forehead. The three young clubs were sleepy eyed, probably because they were sleeping between being brought out for photos.

When the older cubs were used, the people sitting on the bench were told to raise their arms up and the cub was laid across their laps. The person on the cub's head end held the milk baby bottle for the brief seconds it took to take the picture. The bottle was held by a separate caretaker from the one setting the cub down on the laps. The other people were told how to lay their arms or hands on the back of the cub while it was on their laps. After the tiger was picked up by the caretaker, the people could pet in on its back while it was in the caretakers arms.

Besides being photographed with the tiger cubs, photos were also made of each person with the juvenile chimpanzee. The chimp is two years old and was raised totally with people. It sleeps and lives with several people and is totally bonded with these people. The chimp was held in the arms or on the back of his main caretaker for most of the evening. For the photo shoots, the members of the public would be instructed to cup their hands in their laps, then the chimp was stood/sat in their hands facing away from them, and it put its arms up around their neck with its face below or beside theirs. After everyone in the group had their picture made with the chimp, it hopped back in the caretakers arms and then gave everybody a "high five" hand slap. For the smaller children having their pictures made, the chimp was sat beside them. The chimp did not appear stressed or harmed by these interactions, but occasionally clapped or play slapped its legs. The caretaker could ask the chimp to face forward by gently stroking its face forward, if the chimp turned toward the people.

The other animal used infrequently, I observed twice, was an 8 week old gibbon. It was placed in laps.

Hi Tanya and Tracy

Just got this PETA complaint today RE: Antle (in the ER) but thought I'd share... good photos of what appears to be a 3 week old tiger (or less).

The information you all have gathered about young cubs like these being shipped and handled has been very helpful.

Thanks,

Re: Request for Inspection of Bhagavan Antle, dba 'TIGERS' (56-C-0116) for Public Handling of an Infant Tiger

Dear Dr. Goldentyer:

I am writing on behalf of my client PETA to request that the U.S. Department of Agriculture (USDA) investigate Bhagavan Antle, dba "TIGERS" (license number 56-C-0116), for allowing the public to handle a tiger cub who appears to be far younger than 8 weeks old, in apparent violation of the Animal Welfare Act (AWA).

The enclosed photographs were taken on or around June 19 by a visitor to TIGERS and depict a tiger cub being passed to and handled by a visitor to the facility (*see Photos 1–3*). The cub's ears are still curled forward, and his or her eyes are not fully open yet, indicating that **the cub is apparently less than three weeks old**. Under 9 C.F.R. § 2.131(c)(3) and (d)(1), "[y]oung or immature animals shall not be exposed to rough or excessive public handling or exhibited for periods of time which would be detrimental to their health or well-being," and "[a]nimals shall be exhibited only for periods of time and under conditions consistent with their good health and well-being." Moreover, 9 C.F.R. § 2.131(b)(1) mandates that "[h]andling of all animals shall be done as expeditiously and carefully as possible in a manner that does not cause trauma ... behavioral stress, physical harm, or unnecessary discomfort." With respect to tiger cub photo ops, the USDA has determined that infant tigers who are less than approximately 8 weeks old should not be subject to public handling, because their immune systems "have not developed sufficiently to protect them from most communicable diseases," USDA, *Big Cat Question and Answer* 1 (undated).

Additional photos show members of the public touching and holding a large juvenile chimpanzee (*see Photos 3–5*). In light of the considerable strength possessed by chimps and the inherently unpredictable nature of primates, allowing members of the public to hold a juvenile chimp apparently violates 9 C.F.R. § 2.131(c)(1) and (d)(3), which require that during public exhibition "any animal must be handled so there is minimal risk of harm to the animal and to the public, with sufficient distance and/or barriers between the animal and the general viewing public" and "dangerous animals ... must be under the direct control and supervision of a knowledgeable and experienced animal handler." Moreover, allowing this immature animal to be passed from person to person apparently violates 9 C.F.R. § 2.131(c)(3), (b)(1), and (d)(1).

Re: Request for Inspection of Bhagavan Antle, dba 'TIGERS' (56-C-0116) for Apparently Dangerous and Illegal Exhibition of Chimpanzees

Dear Dr. Goldentyer:

I am writing on behalf of my client PETA to request that the U.S. Department of Agriculture (USDA) investigate Bhagavan Antle, dba "TIGERS" (license number 56-C-0116), for the dangerous exhibition of two chimpanzees, in apparent violation of the Animal Welfare Act (AWA).

According to the enclosed news reports and video, two chimpanzees from TIGERS were taken to a showing of *Rise of the Planet of the Apes* on July 11, 2014, at a public theater in Myrtle Beach, S.C. The coverage shows Vali and Sugrive, who are both reportedly 2 years old, being led into the theater by two handlers with no visible restraints or barriers to prevent them from escaping. See Photosheet, Photos 1–2. The chimpanzees can also be seen sitting on the counter next to a cash register "buying" tickets and on a concessions counter with popcorn and soft drinks. See Photosheet, Photos 3–4. The coverage also shows the animals sitting in the laps of their handlers in a crowded theater, reportedly watching the movie. There does not appear to be a barrier protecting the chimpanzees and the public during the screening. One chimpanzee appears to have a leash clasped around his or her waist during the screening, but the clasp is apparently easily within the animal's reach. See Photosheet, Photo 5.

In light of the considerable strength possessed by chimps and the inherently unpredictable nature of primates, parading these animals around in a crowded public place with no effective barriers or restraints apparently violates 9 C.F.R. § 2.131(c)(1), which mandates that "[d]uring public exhibition, any animal must be handled so there is minimal risk of harm to the animal and to the public, with sufficient distance and/or barriers between the animal and the general viewing public so as to assure the safety of animals and the public."

Likewise, exhibiting immature animals in an unfamiliar and potentially frightening place where they are surrounded by cameras, strangers, and commotion, apparently violates 9 C.F.R. § 2.131(c)(3) and (d)(1), which require that "[y]oung or immature animals shall not be ... exhibited for periods of time which would be detrimental to their health or well-being," and "[a]nimals shall be exhibited only

Myrtle Beach chimps watch new 'Planet of the Apes' movie

Posted Jul 15, 2014 4:59 PM EDT
Updated Jul 15, 2014 5:21 PM EDT

By Ian Cross - email

MYRTLE BEACH, SC (WMBF) - Two chimpanzees from the Myrtle Beach Safari went to the opening night of Dawn of the Planet of Apes Friday, and hopefully, this won't be a case of "monkey see, monkey do."

Valli and Sugriva, both two-year-old chimps from the T.I.G.E.R.S. Preserve, went to the opening night of the new movie at the Camlike Broadway 17 Big D Cinema at Broadway at the Beach on Friday night.

The two chimps appeared as excited as they were led into the cinema and paid for their tickets. They even paid for their own popcorn and drinks before heading upstairs to watch the film.

Valli and Sugriva appeared to be riveted by the on-screen performance of their counterparts – at times clapping and watching attentively. At one point, the movie's action even frightened one of the chimps, who turned and hugged the trainer.

According to the theater manager, the chimps gave Dawn of the Planet of the Apes two thumbs up.

The Myrtle Beach Safari is also known as T.I.G.E.R.S., or The Institute of Greatly Endangered and Rare Species. It exists as the Tigers Preservation Station at Barefoot Landing, a free wildlife exhibit, and as a 50-acre preserve in Myrtle Beach, which is home to over 60 big cats and other animals.

27 June 2014

Dear Ms. Mathews,

Thank you for your email of June 26, 2014 concerning Bhagavan Antle. Your concern has been issued number E14-252. If you wish to know the results of our findings, you can do so one of two ways:

1. Inspection reports for licensees are now available on our website after a 21 day mandatory holding period. You may view or retrieve the reports at:
<http://acissearch.aphis.usda.gov/LPASearch/faces/Warning.jspx>.
2. If you wish to request more than inspection reports, or request the results of a complaint on a class Research Facility, you must submit a request, in writing, to our Freedom of Information Act office, using one of the following methods:
 1. Email: foia.officer@aphis.usda.gov
 2. Fax: 301-734-5941
 3. US Mail: USDA, APHIS, FOIA
4700 River Road, Unit 50
Riverdale, MD 20723

Depending on the circumstances of the situation, please allow us enough time (30 to 60 days) to thoroughly investigate your concerns.

Animal Care is the division of the U.S. Department of Agriculture (USDA) that is responsible for the enforcement of the Animal Welfare Act. The Act provides minimum standards for the humane care and use of animals at USDA licensed or registered facilities.

Animal Care inspectors conduct routine unannounced inspections at all USDA licensed and registered facilities to ensure that they are meeting or exceeding these minimum standards. Our inspectors also conduct searches for unlicensed facilities conducting regulated activities. We perform inspections and searches when necessary in response to valid concerns and complaints received from the public to ensure the well-being of the animals and compliance with the law. If violations are found, enforcement action appropriate for the circumstances will be initiated.

Please be assured that we will look into your concerns and take appropriate action if necessary.

Thank you for your interest in the welfare of these animals.

Sincerely,
(b) (6), (b) (7)(C)

Elizabeth Goldentyer, DVM
Regional Director – Animal Care
Eastern Region

Re: Follow-Up to Request for Inspection of Bhagavan Antle, dba 'T.I.G.E.R.S.' (56-C-0116) for Public Handling of an Infant Tiger

Dear Dr. Goldentyer,

I am writing on behalf of my client PETA regarding the U.S. Department of Agriculture's (USDA) failure to protect the health and welfare of infant tigers whom Bhagavan Antle (license number 56-C-0116) exploits for photo ops at his facility "T.I.G.E.R.S." in apparent violation of the Animal Welfare Act (AWA).

On June 26, 2014, PETA submitted photographs taken at T.I.G.E.R.S. of visitors holding a tiger cub who was by all indications *less than 3 weeks old* (complaint no. E14-252). In fact, USDA records show that the agency's own big-cat specialist believed that the photos showed "what appear[ed] to be a 3 week old tiger (or less)." See e-mail from Laurie Gage to Tanya Tims and Tracy Thompson (June 27, 2014). Consequently, USDA Veterinary Medical Officer Dr. Lisa MacElderry conducted an inspection of T.I.G.E.R.S. on July 10, 2014, and *verified* PETA's age estimate of the cubs, stating:

There were three even younger cubs (**4–6 weeks old**) kept in a baby crib in an air conditioned room just off of the employees break room. ... The three youngest cubs were not placed in laps, but were held up by the caretaker next to the public members face and the person instructed how to hold the cub under the front legs with rear legs dangling. The person would hold the cub this way for less than 5 seconds, before the cub would be back with the caretaker and on to the next person.

USDA Complaint Response, Complaint No. E14-252 (July 11, 2014) (emphasis added). However, MacElderry failed to cite T.I.G.E.R.S. or even acknowledge the fact that using 4-week-old tigers for public handling is a clear violation of USDA regulations and policy.

Under 9 C.F.R. § 2.131(c)(3) and (d)(1), "[y]oung or immature animals shall not be exposed to rough or excessive public handling or exhibited for periods of time which would be detrimental to their health or well-being" and "[a]nimals shall be exhibited only for periods of time and under conditions consistent with their good health and well-being." Moreover, 9 C.F.R. § 2.131(b)(1) mandates that "[h]andling of all animals shall be done as expeditiously and carefully as possible in a manner that does not cause trauma ... behavioral stress, physical harm, or

unnecessary discomfort." With respect to tiger-cub photo ops, the USDA has determined that infant tigers who are less than approximately 8 weeks old should not be subject to public handling, because their immune systems "have not developed sufficiently to protect them from most communicable diseases." USDA, *Big Cat Question and Answer 1* (undated).

Indeed, recognizing the health risks inherent to handling even 5-week-old cubs, the USDA cited Bryan Hovatter on June 4, 2015, reporting:

Cubs of this age that have not been adequately vaccinated do not have fully intact immune systems and are therefore susceptible to many infectious diseases. The practices described above do not constitute handling these cubs as carefully as possible and unnecessarily risks harm and discomfort. The licensee must ensure that if the tigers are to be removed from the mother, handling must be done as carefully as possible and that exposure to members of the public does not occur until the cubs are immunocompetent and vaccinated.

USDA Inspection Report of Bryan Hovatter, pg. 1 (June 4, 2015); *see also* USDA Inspection Report of Karl Mogensen 12 (Jan. 6, 2015) (citing a roadside zoo for exposing 4-week-old tiger cubs to public handling and confining them in areas where there is public foot traffic).

Given the known health and welfare risks posed by removing infant animals from their mothers and exposing them to public handling well before their bodies have the ability to fend off disease adequately, it is imperative that the USDA consistently enforce its regulations and prohibit public contact with these delicate animals. Please *cite* T.I.G.E.R.S. for the apparently unlawful exploitation of baby tigers that a USDA inspector observed in 2014 and ensure that the facility complies with USDA regulations and policy in the future. Thank you for your attention to this important matter.

Very truly yours,

Rachel Mathews

2.131 (b) (1)

HANDLING OF ANIMALS.

*** This facility uses tiger cubs for photo shoots and public contact encounters. During this inspection, the licensee was asked about the facility's handling of cubs from birth. He stated that the cubs were pulled from the female tiger at birth and are cared for in the licensee's home on the facility property. The cubs are then brought to the facility at 2-3 weeks of age and put on display behind the counter of the gift shop. The cubs on hand were used for public encounters involving contact with members of the public at 2 ½ weeks of age. Photo shoots involving members of the public have also been taking place using these same cubs. Today the cubs are 5 weeks and 2 days of age and have not been vaccinated. Exposure to members of the public by placing these animals in photo shoots and other public contact encounters is a health concern for the cubs. Cubs of this age that have not been adequately vaccinated do not have fully intact immune systems and are therefore susceptible to many infectious diseases. The practices described above do not constitute handling these cubs as carefully as possible and unnecessarily risks harm and discomfort. The licensee must ensure that if tigers are to be removed from the mother, handling must be done as carefully as possible and that exposure to members of the public does not occur until the cubs are immunocompetent and vaccinated.

Correct from this day forward

3.129

FEEDING.

***The facility's current program for hand rearing tiger cubs is not adequate. Three tiger cubs were born on 28 April 2015 and were removed from the dam the same day. Each cub was fed reconstituted commercially available colostrum (Manna Pro Colostrum Supplement) for the one day before being transitioned to formula. The facility is currently using KMR Formula to comprise the cub diet. The feeding plan states that meat is added (using chicken baby food) to the formula diet at 14-16 weeks of age. There is no guidance for the transition to a meat diet for the cubs, nor any guidance for supplement to be added when the cubs are transitioned. The feeding plan for the adult tigers mentions Wild Trax Feline Supplement powder and Mazuri Carnivore Supplement with Taurine but there is not any specific guidance for the cubs. Additionally, the colostrum being used has not been demonstrated to

provide immune protection to exotic felines such as tigers. Failure to ensure that cubs receive adequate immunity from their dam or an alternate source places cubs at increased risk of disease. Also, the accepted industry standard includes introduction of meat products as early as 2-3 weeks old (added to the formula) and a gradual increase in meat consumption until weaning.

Correct this by contacting the attending veterinarian to develop a plan for these cubs to transition them to a diet which meets all nutritional needs throughout their growth stages and meets currently accepted industry standards. This includes specific guidance for additional supplements once the cubs are transitioned to an all meat diet.

Details of Complaint: See attached.

Results: Inspection conducted on 7-10-14 at Barefoot Landing to observe unloading of animals from transfer vehicle and to observe photos being made with animals and the paying public. Photo shoots observed for 1.5 hours. There were a total of 13 tigers, 1 chimpanzee, and one gibbon present. The three young adult (2 year olds) tigers were on display in the front glass enclosed area, inaccessible to the public. Two older cubs were separated (and not used for photos) from 5 other younger cubs in two enclosures available for public viewing. There were three even younger cubs (4-6 weeks old) kept in a baby crib in an air conditioned room just off of the employees break room. The baby gibbon and chimpanzee had travel enclosures in the air conditioned break room area.

There were no items cited for being out of compliance. There were no instances of rough or excessive public handling. Time intervals of use appeared appropriate for not causing stress. Animals were under the direct physical or verbal control of the handlers at all times. No animals were observed with any stereotypic or abnormal behaviors. Members of the public were directed to sit on a chair bench. Photos were made of groups of from 1 to 8 people, with most groups consisted

of 3-5. Children and babies were included. Purses and articles were placed to the side before sitting on the bench. There was one photographer and 3 handlers at all times. The photo shoots lasted approximately a minute per group. The people would sit or stand behind the bench and receive instruction of where to place their hands. Eight cubs were used for photos and they were rotated. Members of the public were not allowed to "choose" a color or a particular cub, although I heard a few ask. They were told the cubs were being rotated and they were to be photographed with the one whose turn it was. Each cub was used for about 5 minutes, then returned to the play room (the older cubs) or the crib (the 3 younger cubs). When the three younger cubs were observed they were sleeping. One ear on one cub was wet and down, due to one of the other cubs sucking on it. The three youngest cubs were not placed in laps, but were held up by the caretaker next to the public members face and the person instructed how to hold the cub under the front legs with rear legs dangling. The person would hold the cub this way for less than 5 seconds, before the cub would be back with the caretaker and on to the next person. After everyone's photo was taken this way, more photos were made with the cubs face being placed in front of the public members face, forehead to forehead. The three young clubs were sleepy eyed, probably because they were sleeping between being brought out for photos.

When the older cubs were used, the people sitting on the bench were told to raise their arms up and the cub was laid across their laps. The person on the cub's head end held the milk baby bottle for the brief seconds it took to take the picture. The bottle was held by a separate caretaker from the one setting the cub down on the laps. The other people were told how to lay their arms or hands on the back of the cub while it was on their laps. After the tiger was picked up by the caretaker, the people could pet in on its back while it was in the caretakers arms.

Besides being photographed with the tiger cubs, photos were also made of each person with the juvenile chimpanzee. The chimp is two years old and was raised totally with people. It sleeps and lives with several people and is totally bonded with these people. The chimp was held in the arms or on the back of his main caretaker for most of the evening. For the photo shoots, the members of the public would be instructed to cup their hands in their laps, then the chimp was stood/sat in their hands facing away from them, and it put its arms up around their neck with its face below or beside theirs. After everyone in the group had their picture made with the chimp, it hopped back in the caretakers arms and then gave everybody a "high five" hand slap. For the smaller children having their pictures made, the chimp was sat beside them. The chimp did not appear stressed or harmed by these interactions, but occasionally clapped or play slapped its legs. The caretaker could ask the chimp to face forward by gently stroking its face forward, if the chimp turned toward the people.

The other animal used infrequently, I observed twice, was an 8 week old gibbon. It was placed in laps.

Results: On 2-18-16, a team inspection was conducted with VMOs Lisa MacElderry and Susanne Brunkhorst, along with IES Reuben Crumpler and Jim Garofalo. There were four citations, including a direct NCI for veterinary care for an adult lion. There were no tiger cubs at the facility as there are no public showings at this time of year. All of the cubs are at the Florida location. Therefore cub handling could not be evaluated by observation during this inspection. Cub handling at the South Carolina locations will be evaluated during the cub exhibit season later this year. When the assistant director was asked what age they start using the cubs in photos, she stated at a month old. The program of veterinary care stated FVRCP vaccines are given as needed for species. The attending veterinarian was visited during the inspection, and the need to clarify this vaccination program was explained. The attending veterinarian came to examine the cited lion during the exit interview at the facility.

Dr. Mercado provided the following information for the Florida site: When Megan and I did the team inspection along with our IES investigator, there were 3 tiger cubs of approximately 3 months of age, these were been used for photo shoots. There was also an older cub, approximately 5 months old, that was only been used for educational purposes during their show. Hope this is the information you needed..let me know if you need anything else. Thanks

ma'am!

Subject: From HSUS re: TIGERS in SC

Dear Dr. Goldentyer,

We received a complaint about tiger cub handling at TIGERS Myrtle Beach Safari and Preservation Station in South Carolina (56-C-0116). The complainant [REDACTED] el. [REDACTED] and email [REDACTED]

[REDACTED] received a gift from her friends to visit TIGERS. On

September 29, 2015, [REDACTED] visited the Preservation Station location and held an approximately 1-month old tiger cub (photo attached). [REDACTED] has extensive experience in domestic cat rescue and was especially concerned to see such a small, young animal being subjected to two continuous hours of handling by the public. She described the cub as "very droopy." It was 88 degrees, there was no air conditioning, and the tigers appeared to be hot. She also noted that the animal handlers appeared to be teenagers rather than experienced adults.

Two days later, on October 1, 2015, she visited Myrtle Beach Safari where staff put a 4-month old tiger on her lap. Based on TripAdvisor reviews posted in 2015 (also attached), TIGERS appears to routinely use very small and very large cubs for public handling. There are numerous comments that describe holding 1-month-old tiger and lion cubs, 6-week-old tiger and lion cubs, and 4, 5, and 6-month old tiger cubs. Some of the photos posted depict members of the public, including children, having contact with very young cubs and much older cubs.

Could the USDA please thoroughly investigate TIGERS animal handling practices?

Best regards,
[REDACTED]

Dear Complainant:

Thank you for your correspondence dated 10/28/2015 concerning Bhagavan Antle. Your concern has been issued number AC16-084. If you wish to know the results of our findings, you must send a request, in writing, to our Freedom of Information Act office. Depending on the circumstances of the situation, please allow us enough time (30 to 60 days) to thoroughly look into your concerns.

FOIA requests can be submitted three ways--

1. Email: foia.officer@aphis.usda.gov
2. Fax: 301-734-5941
3. US Mail: USDA, APHIS, FOIA
4700 River Road, Unit 50
Riverdale, MD 20737

Animal Care is the division of the U.S. Department of Agriculture (USDA) that is responsible for the enforcement of the Animal Welfare Act. The Act provides minimum standards for the humane care and use of animals at USDA licensed or registered facilities.

Animal Care inspectors conduct routine unannounced inspections at all USDA licensed and registered facilities to ensure that they are meeting or exceeding these minimum standards. Our inspectors also conduct searches for unlicensed facilities conducting regulated activities. We perform inspections and searches when necessary in response to valid concerns and complaints received from the public to ensure the well-being of the animals and compliance with the law. If violations are found, enforcement action appropriate for the circumstances will be initiated.

Please be assured that we will look into your concerns and take appropriate action if necessary.

Thank you for your interest in the welfare of these animals.

Sincerely,
(b) (6), (b) (7)(C)

Elizabeth J. Goldeneyer
Director, Animal Welfare Operations

Results: Complaint: Licensee allowed direct contact between an adult jaguar and a member of the public. Result: A focused inspection was done on 3-27-2019 and the sub adult jaguar was observed with its two tiger cagemates. It is not a full grown jaguar. The Jin Gates videos posted on instagram were all filmed at Antle's property with no members of the public present. It was a film production with a closed set making commercials. Jin brought his own film team, and Antle's group also filmed. For the scene with Jin in a Jaguar brand motor vehicle with a jaguar cat sitting next to him, a handler was in the back seat with a leash on the cat, along with another handler on the other side of the cat with a second leash. Antle and another handler are the two in black shirts with their myrtlebeachsafari logo on them. This scene was a PSA (public service announcement). At the time of the filming (last year) the jaguar, did not have its adult canine teeth. Also filmed was Jin walking a tiger, a scene with a juvenile chimpanzee, and one with a baby lion. All of Antle's animals are handled by multiple employees on a daily basis from the time of their births. There was no public contact with a dangerous animal, as Jin was an actor in these film shoots.

Re: Request for Investigation of Apparent Animal Welfare Act Violations at T.I.G.E.R.S. (License No. 56-C-0116)

Dear AC East:

I am writing on behalf of PETA to request that the USDA investigate Bhagavan Antle, dba "T.I.G.E.R.S." (license number 56-C-0116), for allowing direct contact between an adult jaguar and a member of the public, in violation of the Animal Welfare Act (AWA).

On October 10, T.I.G.E.R.S. and Jin Gates posted videos and photos on Instagram of Jin Gates in a car with an adult jaguar. (*See* [Video 1 \(Instagram post\)](#), [Video 2](#), [Video 3 \(Instagram post\)](#), and Photos 1-3 with links to Instagram posts.)

There were no barriers or staff between this dangerous animal and the member of the public, placing both at risk of injury, in apparent violation of 9 C.F.R. § 2.131(c)(1), which requires that "[d]uring public exhibition, any animal must be handled so there is minimal risk of harm to the animal and to the public, with sufficient distance and/or barriers between the animal and the general viewing public so as to assure the safety of animals and the public."

Indeed, it would be impossible for a handler to be in direct control of an animal that is forced into a confined area on a person's lap and in close proximity to their face in apparent violation of 9 C.F.R. § 2.131(d)(3), which requires that "[d]uring public exhibition, dangerous animals such as lions, tigers, wolves, bears, or elephants must be under the direct control and supervision of a knowledgeable and experienced animal handler." In addition, it appears that T.I.G.E.R.S. is not handling this jaguar under conditions consistent with their good health and well-being as required by 9 C.F.R. § 2.131(d)(1).

The USDA has pointed out "*the inherent danger* present for both the viewing public and the exhibited animal(s) where there is any chance that the public could come into contact with juvenile or adult big cats" and states that "*direct public contact with juvenile and adult felines does not conform to the handling regulations, because it cannot reasonably be conducted without a significant risk of harm to the animal or the public.*" See USDA, Big Cat Question and Answer, Commonly Asked Big Cat Questions at 1 (interpreting 9 C.F.R. § 2.131(c)(1)) (emphasis added); USDA APHIS, 2013 Animal Welfare Inspection Guide, A-57; *see also Antle v. Johanns*, No. CIV.A. 4:06-1008, 2007 WL 5209982 (D.S.C. June 5, 2007), *aff'd*, 264 F. App'x 271 (4th Cir. 2008) (dismissing an action to set aside a USDA decision that interpreted there to be a violation of 9 C.F.R. § 2.131

Details of Complaint:

SEE ATTACHED

Results:

Routine inspection conducted on 6-25-19 with Big Cat Specialist Dr. Laurie Gage. No non-compliant items cited.

Complaint: Antle dopes his animals with growth hormones to enhance their size.

Finding: Antle appears to overfeed some of his animals and many of them are overweight. In the past he stated he does that so they are always satiated since employees hand walk animals. A very large male lion is used to breed with large female tiger(s) and has produced extraordinarily large liger offspring. Because hybrids are often larger than either parent, this seems like a reasonable explanation for the size of the ligers at his facility. When asked about his giving growth hormones, he stated he would not know where to get any, or which ones would be used on animals. He told us the baby nondomestic cats are fed a special formula which includes Esbilac and he adds goat's milk, and later half and half milk as they grow larger. He feels that makes them grow larger and faster. The allegation cannot be proven or disproved.

Complaint: They are mixing crushed Xanax into the diets of the cubs to keep them calmer so they can extend the playtime periods of these cubs.

Finding: Cub interactions with public members during tour were for 20 - 25 minutes. There are three day tours offered each week. The cubs behaved normally. The youngest cubs are held up under their forearms by staff for pictures next to the public members. This position tends to relax the cub as it dangles. There are evening cub interactions every night, 7 days a week. Cubs were observed sleeping in the cub room that evening between photo ops. When cubs were placed on laps for photos or held

USDA-APHIS-Animal Care

up next to people, they behaved normally. The public does not "play" with the cubs, but the cubs are allowed to walk across their laps during the encounters, or are very briefly placed on laps for photos, while drinking milk. All behavior seemed within normal limits, however some of the cubs seemed tired or sleepy, probably due to the long hours they are used for these activities.. .

Complaint: Antle euthanizes his photo cubs after 5 months using a special mixture that makes them die in their crate, then he incinerates them on property.

Finding: There is an incinerator on the property, which he stated is for disposal of adults who die. Cubs of all ages, from a few weeks old to maybe six months old were seen on the property. Also young tigers (less than 2 years old) were exhibited swimming in a pool for the public to observe through a window. The records document multiple placements of tigers at other facilities between inspections. Although we cannot definitively prove or disprove this allegation, it seems very unlikely. All of the cats are given names, there are a lot of employees who seem to genuinely care for all of the cats, so these things would seem to make it unlikely that Antle could or would euthanize his tiger cubs. His inventory records were not detailed, however, so it is difficult to follow individual animals from year to year. The animals in his inventory are only given numbers on the inventory sheet, not listed by their names, so animals that move or die are more difficult to positively identify.

Complaint: There is a breeding area someplace on the property that's in the basement of an old barn, where the cats are held in tiny dark cages, that does not get inspected because it's not in sight of the inspectors.

Finding: This sounds like a description of the converted barn where many of tigers are housed between being rotated out into exercise areas. There is also an upstairs apartment where people live and where the tiger cubs are raised. It includes a kitchen, living room, and an animal floor pen area. This area and all animals in the barn have always been inspected. The lighting is very adequate, but the stalls where the adult cats are kept are darker than the hallway, which is very bright. The cats housed in these stalls also have access to outdoor enclosures.

Subject: USDA APHIS ANIMAL CARE - Animal Welfare Complaint Submission

Details of complaint:

- Name of USDA licensee/registrant: Doc Antle T.I.G.E.R.S
- USDA license/registration number:
- City/State: Myrtle Beach , SC
- Complaint details: I have first hand knowledge that Doc Antle AKA TIGERS preserve in Myrtle Beach SC has been doping his animals with growth hormones to enhance their size.

They are also mixing crushed Xanax into the diets of the cubs to keep them calmer so they can extend the playtime periods of these cubs.

This information comes from the a personal friend that was responsible for preparing diets at his facility until last month. He made her sign a non disclosure agreement so she's afraid to call him out. I'm not afraid.

She also said that his USDA inspector, Lisa McElderry (sic) absolutely lives him and drinks the kool-aide that he serves her. She would not be an acceptable inspector to follow up with this particular complaint.

To make things even worse, she said that Doc, euthanizes his photo cubs after 5 months using a special mixture that makes them die in their crate, then he incinerates them on property. We have heard this from several former employees of TIGERS. There is also a breeding area someplace on the property that's in the basement of an old barn, where the cats are held in tiny dark cages, that does not get inspected because it's not in sight of the inspectors.

Please follow up on these complaints with someone OTHER than Lisa M.

<p>Results: Routine inspection conducted on 6-25-19 with Big Cat Specialist Dr. Laurie Gage. No non-compliant items cited.</p> <p>Complaint: Myrtle Beach Safari has been allowing public contact with big cats outside of the 8-12 week window. Adult big cats as well as cubs that are only 7 day old cubs.</p> <p>Findings: No public contact with adult big cats was observed. The USDA Animal Welfare Act regulations do not specifically prohibit contact with infants of any age as long as the animals are not being stressed or harmed. The observed morning tour included encounters with tiger cubs and these were a range of ages, although the youngest appeared to be at least 6 weeks old. Antle stated he does not use cubs until they are stable, at least 30 days old. The ages of the cubs and juveniles he uses depends on their availability and their personalities, so some over 12 weeks old probably have been used to interact directly with the public.</p>

- USDA license/registration number:
- City/State:Myrtle Beach, SC
- Complaint details:My complaint is about the "T.I.G.E.R" Myrtle Beach Exhibit. The elephant Bubbles is not in goo condition, as Elephants are not be alone, she has been the only elephant at the Exhibit for over 30 years which can cause depression for mammals, specifically Elephants.

As an animal lover, I saw her eyes drooping and the elephant looks underweight.

This "American" exhibit allows multiple humans at once ride her back in the water, allows dogs to jump on her back, and forces her to engage in social media challenges such as "the bottle cap" challenge. I am concerned for her well being and safety as being lonely, for over thirty years is heartbreaking, but also unamerican.

Dear Complainant:

Thank you for your correspondence dated 13-Mar-20. We are reviewing your concerns and assigned tracking number AC20-202. Please allow us enough time (30 to 60 days) to thoroughly look into your concerns. You may submit a request to the Animal and Plant Health Inspection Service (APHIS) Freedom of Information Act (FOIA) office to obtain any publically available information regarding our review.

FOIA requests can be submitted three ways:

1. Web Request Form: <https://efoia-pal.usda.gov/App/Home.aspx>
2. Fax: (301) 734-5941
3. U.S. Mail:
USDA-APHIS-FOIA
4700 River Road, Unit 50
Riverdale, MD 20737

Should you have any questions regarding the APHIS FOIA process or need assistance using the Web Request Form **please contact the APHIS FOIA office at 301-851-4102**.

Animal Care is a program within the U.S. Department of Agriculture (USDA) that directs activities to ensure compliance with and enforcement of the Animal Welfare Act and the Horse Protection Act. Animal Care establishes standards of humane treatment for regulated animals and monitors and achieves compliance through inspections, enforcement, education, and cooperative efforts under the Acts.

Please be assured that we will look into your concern(s) and take appropriate action(s).

Thank you for your interest into the humane treatment of these animals.

Sincerely,

(b) (6), (b) (7)(C)

Betty Goldentyer
Deputy Administrator
Animal Care

Benson, Amy V - APHIS

Subject: Fwd: WWE Undertaker

It has come to our attention that WWE member "Undertaker" visited T.I.G.E.R.S. in Myrtle Beach, SC recently and was allowed to pet an adult big cat and there was no barrier between him and the big cat. Below is photo evidence from Undertaker's Instagram page. Please investigate Doc Antle and this violation immediately. Thank you!
